

Name: _____

Environmental Changes Worksheet

Plants and animals around the world are being forced to adapt, move, or die as their environment changes--for reasons like habitat loss, herbicide/pesticide use, warming temperatures, and invasive species. In this worksheet, pick a species whose environment is changing and design a way to help protect that animal.

Species: _____

Environmental change (examples: habitat loss, herbicide/pesticide use, warming temperatures, invasive species, change in land or water, etc.):

How does the environmental change affect your species (examples: population decreasing, losing home, losing food source, getting poisoned, etc.)?

Way(s) to help (examples: provide food, water, or shelter for that species, avoid herbicides/pesticides, cut down on energy use, supervise pets outside, write letters to government officials, etc.):

Name: _____

In the space below, make a poster educating others on your species, the environmental change that affects it, and ways others can help protect it!
